

WORKING AT HEIGHT AND CONFINED SPACE SAFETY COVER FROM ABFAD LTD

Working at height and confined space rescue

As per the 1974 health and safety at work act, keeping people safe whilst working is paramount in all industries.

Abfad provide a trained and equipped rescue team capable of keeping people safe when Working at Height or working in Confined Spaces. Our rescue team is able to perform the necessary assessment of the emergency situation and, if required, conduct any rescue needed in a safe and controlled way. Recovering casualties in the fastest possible time and administering first aid maybe the difference between life or death.

Attempting to carry out an unprepared rescue, without proper training or equipment only serves to put more people at risk within the confined space. Unprepared people attempting an urgent rescue attributes for almost two thirds of deaths in confined spaces. Only a specialist rescue team should attempt any rescue.

The dangers of confined space working and working at height should never be underestimated. Having a competent and qualified team on site to provide rescue and first aid can save lives.

- **EMERGENCY RESCUE TEAMS** - Abfad can provide a rescue team for safety cover of personnel working in confined spaces and working at height.
- **ROPE ACCESS TRAINED RESCUE TEAM** - Our rescue teams are trained in providing rescue from confined spaces and are also trained and qualified in rope access from IRATA. Allowing them to provide a high level of emergency rescue in a wide range of vertical or horizontal locations.
- **POWER STATIONS AND CHP PLANTS** - We've been consistently working in power stations and CHP plants across the UK since 1998. Here's some of the feedback our teams receive:

"Abfad provided confined space rescue and safety cover works to the recent major outage. This involved 24 hour working on a busy/tight project timescale. They were selected for this project after a very professional performance (previously). Once again they performed to a very high level providing safety cover and support as well as supporting the site on other works they could do."

"It's like having another set of safety professionals on site."

"All the team had the right attitude, nothing was too much, whether this was from a safety perspective or rope access, confined space management. They also offered their services regarding house keeping and cable management. A good job... well done."

"A very valuable, proactive team."
